

[STYPTIC PENCIL OR STICK HOUSED IN A TUBULAR DISPENSER]

Abstract

A moisture-proof sealable styptic pencil dispenser including a styptic pencil, a sealable cover and holder with a base having a top surface adapted for holding and enclosing the styptic pencil. The holder also has an inner retainer having a top end located generally circumferentially around the base and a manual actuator for adjusting the distance of the base to the top end of the retainer located at the bottom end of the dispenser. The adjusting actuator has a grip, whereby the distance of the base to the inner retainer is adjusted by the rotation or other manipulation of the grip to allow only the styptic pencil tip to be exposed to prevent moisture from reaching the pencil body.
